

AVAILABLE IN 2 OPTIONS

Hewitt hydraulic Pontoon Legs are available in two models to best match the size, style, and operating conditions of your pontoon boat. These models help preserve the appearance and value of your pontoon and eliminate the need to tie off your pontoon boat and free up space at your dock. In addition to Hewitt's trademark heavy-duty aluminum construction, these models feature four 2" diameter hydraulic cylinders which are 20% stronger than those of competitors. The hydraulic system is powered by a 12V DC pump and uses environmentally friendly, biodegradable fluid.

WIDE-BASE HYDRAULIC LEGS

OVER 50 YEARS OF QUALITY AND INNOVATION IN MANUFACTURING

Hewitt Machine & Manufacturing, Inc. is known to marine dealers and waterfront owners as a leading dock and boat lift manufacturer in Minnesota. The manufacturing plant is located along Highway 14 in Nicollet, Minnesota. The company annually employs over 100 full time and seasonal workers. The docks and lifts manufactured are shipped to Hewitt dealers worldwide.

ALSO AVAILABLE: Free Standing Canopy Frames

Exposure to sun, wind and driving rain can ruin your pontoon from the inside out. Cracking, fading and peeling not only takes away from the look, comfort and function of your pontoon, it reduces the value. Hewitt custom-designed free standing canopies provide years of beautiful, maintenance-free protection. Canopies are available in 120" or 138" widths and a wide variety of lengths. Choose from four styles: standard, tower, peak roof or curtain frame with vinyl or Defender fabric covering.

LIFT ANYWHERE PONTON LEGS

AVAILABE IN HYDRAULIC WIDE-BASE & STRAIGHT MODELS

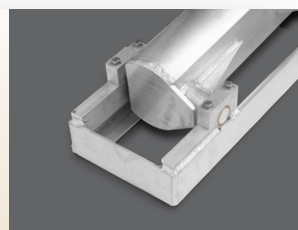

DESIGNED TO WORK WITH YOUR BOAT AND TRAILER

Leg assemblies are bolted directly to the existing frame of your pontoon boat and will not interfere with trailering or normal operation. In the retracted position, legs are less than 6-1/2" below the deck allowing the use of scissors or bunk-style trailers. The Straight Leg and Wide-Base models add approximately 425 lbs. to your boat weight and have a lifting capacity of 6000 lbs. Each leg assembly stands on a 30" pivoting foot that compensates for uneven terrain and provides excellent stability, even on soft bottoms. At maximum leg extension, the underside of the boat's deck is 72" above the bottom of the feet.

FEATURES:

Shared by both Wide-Base and Straight Leg models.

HEAVY-DUTY PIVOTS WITH BRASS BUSHINGS

HEAVY-DUTY 2" HYDRAULIC CYLINDERS

LEG ASSEMBLY IN RETRACTED POSITION

EXTRA ENFORCEMENT

WIRELESS REMOTE CONTROL

ONBOARD SCREEN!

ADJUST EACH LEG INDEPENDENTLY AND SEE LOCATION OF LEGS

HYDRAULIC PUMPS

WIDE-BASE HYDRAULIC LEGS

WIDEST STANCE ON THE MARKET!

Wide-Base and Straight Leg models are identical with one exception. Specially designed angled mounting brackets give these legs the widest base of any on-board lift available today – 72"! That's 24" wider than the nearest competition.

This extra width and stability is ideal for twin or triple pontoon boat owners who live or travel in areas of strong winds and rough water.

Each leg is connected to its own pump, providing faster extension and retraction. Front and rear legs can be operated separately to level your boat.

STRAIGHT HYDRAULIC LEGS

BEST FOR MILD WIND & CALM WATERS

This model can be used with either twin or triple pontoon boats and uses heavy-duty 6" diameter aluminum tubing for superior strength and greater load carrying capacity. Each leg is connected to its own pump, providing faster extension and retraction. Front and rear legs can be operated separately to level your boat.

BETTER THAN THE COMPETITION

OUR PONTOON LEGS CAN BE ADJUSTED INDIVIDUALLY
